

Sprint 1 Retrospective:

- What worked well?
 - Good communication between team members
 - Good communication at the scrum meetings
 - Everyone always had a task to do
 - Front-end and Map development/Integration
- What could be improved?
 - Planning
 - Spikes should be at the start of the sprint, rather than halfway through
 - Time management
 - Understanding/knowing how every layer of the product comes together – i.e. what software do we need to link the webpage to the database.
 - Using the burndown charts to manage the efficiency of our team
- What will be accomplished/improved in the next sprint?
 - Using the burndown charts to keep track of how fast we are developing the product
 - Create a project board on GitHub and use issues to track the development of each user story
 - Better communication between each development layer
 - Spikes will only be over the first couple days
